## **Technical Report 2201**

### **2022 Percentile Ranks for DIBELS 8<sup>th</sup> Edition Benchmark Assessments**

In this report we present updated percentile ranks for all DIBELS 8th Edition (i.e., DIBELS 8) benchmark assessments. We chose to update the DIBELS 8 percentile ranks for the 2022-2023 school year for two reasons. First, with DIBELS 8 now in wide use in schools across the U.S., we believed it was important to update the percentiles using data collected from a larger and more representative sample. The original data used to establish DIBELS 8 percentiles (University of Oregon, 2020) were collected during the 2017-2018 and 2018-2019 DIBELS validation studies, which yielded a nationally representative sample of 8,997 students in kindergarten through grade 8 from 48 schools in all nine Census divisions. Data for the revised 2022 percentiles were collected during the 2021-2022 school year and the sample includes 2,869,626 students from all 50 states and both the DIBELS Data System and mCLASS DIBELS 8. Second, we wanted to reflect the current nationwide distribution of scores after a period of unprecedented disruption and challenge to typical instructional practices. These percentiles are thus appropriate for normative comparisons for students receiving instruction following the COVID-19 pandemic.

### **Recommended Standards for Interpreting Percentile Rank Scores**

Percentile ranks (or percentiles) are a common metric used to facilitate the interpretation of individual characteristics relative to the distribution of those characteristics in a particular group of people. Percentiles can describe measurable physical characteristics, such as height or weight, as well as more abstract attributes, such as intelligence or reading proficiency. Regardless of the attribute being measured, the validity of the interpretation depends on understanding both what is being measured and the norm group used for comparison.

As an example, consider the issue of interpreting an individual's height—both as a *raw score* (e.g., number of centimeters tall) and a *percentile score* (i.e., the percentile for height). If we know that someone is 164 centimeters tall, we have some information about him or her, but we know very little else. Without knowing more about *who the person is* and *to whom they are being compared*, both raw scores and percentiles are difficult to interpret.

On the one hand, if a person who is 164 centimeters tall is compared to the distribution of adult males in the U.S., they would fall below the 5<sup>th</sup> percentile and we could conclude that this person is short, relative to other U.S. adult males (Halls & Hanson, 2000). In contrast, if we compare this same person to 12-year-old children in the U.S., they would fall at the 95<sup>th</sup> percentile and we could conclude that this person is quite tall, compared to other 12-year-olds in the U.S. (National Center for Health Statistics, 2000). If we used either of the above comparison groups and the person was an adult woman, we would have made an incorrect comparison and drawn the wrong conclusion: a height of 164 centimeters falls at the 50<sup>th</sup> percentile for adult women in the U.S., which is in the average range (Halls & Hanson, 2000). As this example makes clear, the same raw score can correspond to very different percentile ranks depending on the comparison group.

Educators frequently use percentiles to describe the relative position of student scores on performance-based measures. In all cases, the language used to describe the percentile score should convey the maximum possible information about the group to which the individual is being compared. Consider the following example as a guideline when interpreting student reading performance using the percentiles in this report. If 3<sup>rd</sup>-grade Jonny performed at the 75<sup>th</sup> percentile on a commonly accepted measure of Oral Reading Fluency (e.g., DIBELS Oral Reading Fluency), it would be appropriate to say, “On a standard assessment of Oral Reading

Fluency, Jonny performed as well as or better than *75 percent of other 3<sup>rd</sup> grade students in a nationally-representative sample of 3<sup>rd</sup> grade students.*”

Percentile scores range from 1 to 99, and these numeric values can also be described qualitatively. Table 1 provides recommended descriptors for various percentile ranges. When used, these descriptors should be used in conjunction with a description of the comparison group. Therefore, a more complete description of Jonny’s performance could read, “On a standardized assessment of Oral Reading Fluency, Jonny performed as well as or better than 75 percent of other 3<sup>rd</sup> grade students who were assessed using DIBELS Oral Reading Fluency in fall of the 2021-2022 school year, and whose scores were entered into the mCLASS or DIBELS Data Systems. This performance places him in the *above average range* compared to the students in this sample.”

*Table 1. Recommended Descriptors Associated with Percentile Ranges*

<u>Percentile Range</u>	<u>Descriptor</u>
98 <sup>th</sup> percentile and above	Upper Extreme
91 <sup>st</sup> to 97 <sup>th</sup> percentile	Well-Above Average
75 <sup>th</sup> to 90 <sup>th</sup> percentile	Above Average
25 <sup>th</sup> to 74 <sup>th</sup> percentile	Average
9 <sup>th</sup> to 24 <sup>th</sup> percentile	Below Average
3 <sup>rd</sup> to 8 <sup>th</sup> percentile	Well-Below Average
2 <sup>nd</sup> percentile & below	Lower Extreme

In the tables that follow, we first report percentile ranks by grade for all available subtests and scores, followed by two tables for the DIBELS 8 Composite Score percentile ranks: one for the Composite Score in kindergarten through Grade 4, and one for the Composite Score Grades 5 through 8. For example, Table 2 presents the percentiles for kindergarten, a grade in which students are assessed using four subtests: Letter Naming Fluency (LNF), Phonemic Segmentation Fluency (PSF), Nonsense Word Fluency (NWF), and Word Reading Fluency (WRF). The NWF subtest provides two related but distinct scores, Correct Letter Sounds (CLS) and Words Recoded Correctly (WRC), resulting in a table with percentile ranks for five scores: LNF, PSF, NWF–CLS, NWF–WRC, and WRF. Complete descriptions of and additional information regarding these subtests is available in the DIBELS 8 Technical Manual (University of Oregon, 2019).

For each subtest, tables include columns representing each of the three benchmark periods: beginning, middle, and end of year. Benchmark periods are denoted in decimal form, such that 0.1 represents the beginning of kindergarten, 0.2 represents the middle of kindergarten, and 0.3 represents the end of kindergarten. The inclusion of a grade indicator alongside the benchmark period eases reading the tables, which each extend over many pages. Similarly, the raw score is repeated on both the left and right side of each table, to facilitate locating the desired percentile rank.
