## Technical Report 2001

### Percentile Ranks for DIBELS 8<sup>th</sup> Edition Benchmark Assessments

In this report we present percentile ranks for DIBELS 8th Edition benchmark assessments, based on data collected by schools participating in the Assessment Innovation Project during the 2017-18 and 2018-19 school years. Percentile ranks (or percentiles) are a common metric used to facilitate the interpretation of individual characteristics relative to the distribution of those characteristics in a particular group of people. Percentiles can describe measurable physical characteristics, such as height or weight, as well as more abstract attributes, such as intelligence or reading proficiency. In either case, the validity of the interpretation depends on understanding what is being measured and the norm group being used for comparison.

#### Recommended Standards for Interpreting Percentile Rank Scores

As an example, consider the issue of interpreting an individual's height—both as a *raw score* (number of centimeters tall) and a *percentile score* (percentile for height). If we know that someone is 164 centimeters tall we have some information about him or her, but we know very little else. Without knowing more about *who the person is* and *to whom they are being compared*, both raw scores and percentiles are difficult to interpret.

On one hand, if a person who is 164 centimeters in height is compared to adult males in the U.S., their score would be considered below the 5<sup>th</sup> percentile and we could conclude that this person is short, relative to other U.S. adult males (Halls & Hanson, 2000). In contrast, if we compare this person to 12-year-old children in the U.S., their score would fall at the 95<sup>th</sup> percentile and we could conclude that this person is quite tall, compared to other 12 year-olds in the U.S. (National Center for Health Statistics, 2000). If we used either of the above comparison

groups and the person was actually an adult woman, we might have made an incorrect comparison and would draw the wrong conclusion. When the raw score value of 164 centimeters is compared to adult women in the U.S., the score falls at the 50th percentile for height, which is in the average range (Halls & Hanson, 2000). The same raw score may correspond to very different percentile scores depending on the comparison group.

Educators use percentiles frequently to describe the relative position of student scores on performance-based measures. In all cases, the language used to describe the percentile score should convey the maximum possible information about the group to which the individual is being compared. Consider the following example as a guideline when interpreting student reading performance using the percentiles in this report. If 3<sup>rd</sup>-grade Jonny performed at the 75<sup>th</sup> percentile on a commonly accepted measure of Oral Reading Fluency (e.g., DIBELS Oral Reading Fluency), it would be appropriate to say, “On a standard assessment of Oral Reading Fluency, Jonny performed as well as or better than *75 percent of other 3<sup>rd</sup> grade students who participated in the Assessment Innovation Project.*” A complete description of the sample involved in the Assessment Innovation Project is available in the DIBELS 8<sup>th</sup> Edition Technical Manual (University of Oregon, 2019).

Percentile scores range from 1 to 99, and these values can be described qualitatively. Table 1 provides descriptors for various percentile ranges and should be used in conjunction with a description of the comparison group. Therefore, a more complete description of Jonny’s percentile above could read, “On a standard assessment of Oral Reading Fluency, Jonny performed as well as or better than 75 percent of other 3<sup>rd</sup> grade students who participated in the Assessment Innovation Project during the 2017-18 and 2018-19 school years. This performance places him in the *above average range* compared to students in this sample.”

*Table 1. Recommended Descriptors Associated with Percentile Ranges*

<u>Percentile Range</u>	<u>Descriptor</u>
98 <sup>th</sup> percentile and above	Upper Extreme
91 <sup>st</sup> to 97 <sup>th</sup> percentile	Well-Above Average
75 <sup>th</sup> to 90 <sup>th</sup> percentile	Above Average
25 <sup>th</sup> to 74 <sup>th</sup> percentile	Average
9 <sup>th</sup> to 24 <sup>th</sup> percentile	Below Average
3 <sup>rd</sup> to 8 <sup>th</sup> percentile	Well-Below Average
2 <sup>nd</sup> percentile & below	Lower Extreme

*Source:* Salvia and Ysseldyke (2004); Sattler (2001).

In the tables that follow, we first report percentile ranks for all relevant subtests and scores by grade, followed by two tables for composite score percentile ranks, one for kindergarten through Grade 4, and one for Grades 5 through 8. For example, Table 2 presents percentile ranks for kindergarten, which uses the Letter Naming Fluency (LNF), Phonemic Segmentation Fluency (PSF), Nonsense Word Fluency Correct Letter Sounds (NWF\_CLS), Nonsense Word Fluency Words Recoded Correctly (NWF\_WRC), and Word Reading Fluency (WRF) subtests. Each table includes three columns for each subtest representing the benchmark periods: beginning, middle, and end of year. Periods are represented in decimal form, where 0.1 represents beginning of kindergarten, 0.2 middle of kindergarten, and 0.3 end of kindergarten. The inclusion of a grade indicator eases reading the tables, which each extend over many pages.
